

DEWATERING COMPACTING AND CONVEYING PRESS

CONVOYING

Our machine can press and convoy rumen, hairs and the feathers horizontally or vertically in a piping system and this is not possible with other system like screws or belts or other.

HYGIENIC WORK PLACE

The transport of material is made in closet piping and at the end can be installed a closed container so we can reduce the problem of smell and the working place become hygienic and clean.

DEWATERING AND COMPACTING

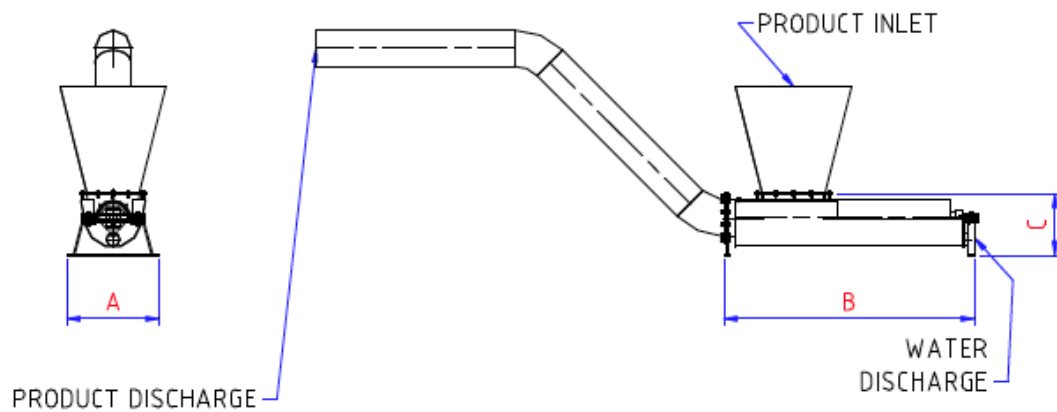

Our compactor can reduce the weight of the material until 40-50%. This means that the cost of our machine can be amortized in a short time.

DEPENDABILITY

The system dependability is very high because is composed only by independent and simple hydraulic components. It means that an annually control is enough.

DEWATERING PRESS FOR RUMEN
